[Company letterhead: AshantiHub legal name, registered address, phone, email]

Date: 16 October 2026
Our ref: [reference number]

The Head
Payment Systems Department
Bank of Ghana
[Bank of Ghana office address, Accra]

Dear Sir/Madam,

REQUEST FOR REGULATORY GUIDANCE AND NO-OBJECTION: USE OF HUBTEL AS PAYMENT AGGREGATOR AND FUNDS-HOLDING PARTNER FOR THE ASHANTIHUB CUSTOMER WALLET

1. INTRODUCTION

[AshantiHub legal name, registration number, date of incorporation] ("AshantiHub") operates an online marketplace connecting customers in the Ashanti Region with local businesses, service providers, event organisers and stays, with delivery coordinated through the platform. We write to seek the Bank of Ghana's guidance on, and no-objection to, the payment structure described below before we make any wallet or escrow feature available to the public. We understand that access to a licensed provider's collection and disbursement services for this purpose depends on a letter from the Bank.

2. WHAT WE ARE ASKING FOR

We intend to offer customers and vendors a wallet within AshantiHub, with all underlying money held and moved by a Bank of Ghana-licensed payment service provider [provider's legal name and licence category, to be confirmed in writing by the provider] (the "Provider") acting as our payment aggregator. We respectfully request the Bank's confirmation of:

1. whether this structure is permissible under the Provider's existing authorisation, or whether AshantiHub requires its own licence, authorisation or registration under the Payment Systems and Services Act, 2019 (Act 987) and related directives;
2. any conditions, limits or reporting obligations the Bank would attach, including applicable wallet balance and transaction limits; and
3. a meeting with the Department, if helpful, so that we can present the design and our controls in detail.

3. WHAT WE PROPOSE TO DO

- **AshantiHub does not hold customer or vendor money.** All funds collected for an order are held by the Provider in its designated account. No customer funds are placed in an AshantiHub-owned bank or mobile-money account.
- **The AshantiHub wallet is a ledger, not a store of funds.** It is a double-entry record of who is entitled to what, backed one-for-one by funds held at the Provider. A customer's wallet shows refunds and credits owed to them; a vendor's wallet shows money that is Pending (paid but not yet released) or Available (released and withdrawable).

- **Money moves only through the Provider.** Customers pay through the Provider's checkout (mobile money or card). Vendors and riders are paid out by the Provider to their own verified accounts. AshantiHub sends instructions; the Provider executes them.
- **Funds are released only after delivery is verified.** A vendor's money is released once the customer has confirmed receipt and an AshantiHub Support officer has completed a verification call with no dispute. Disputes are settled within 72 hours of purchase, and an open dispute blocks release.
- **Our platform fee is deducted at release,** as a disclosed percentage or flat amount per order. Fee rules are published and changes need approval from two separate staff roles.

4. FLOW OF FUNDS

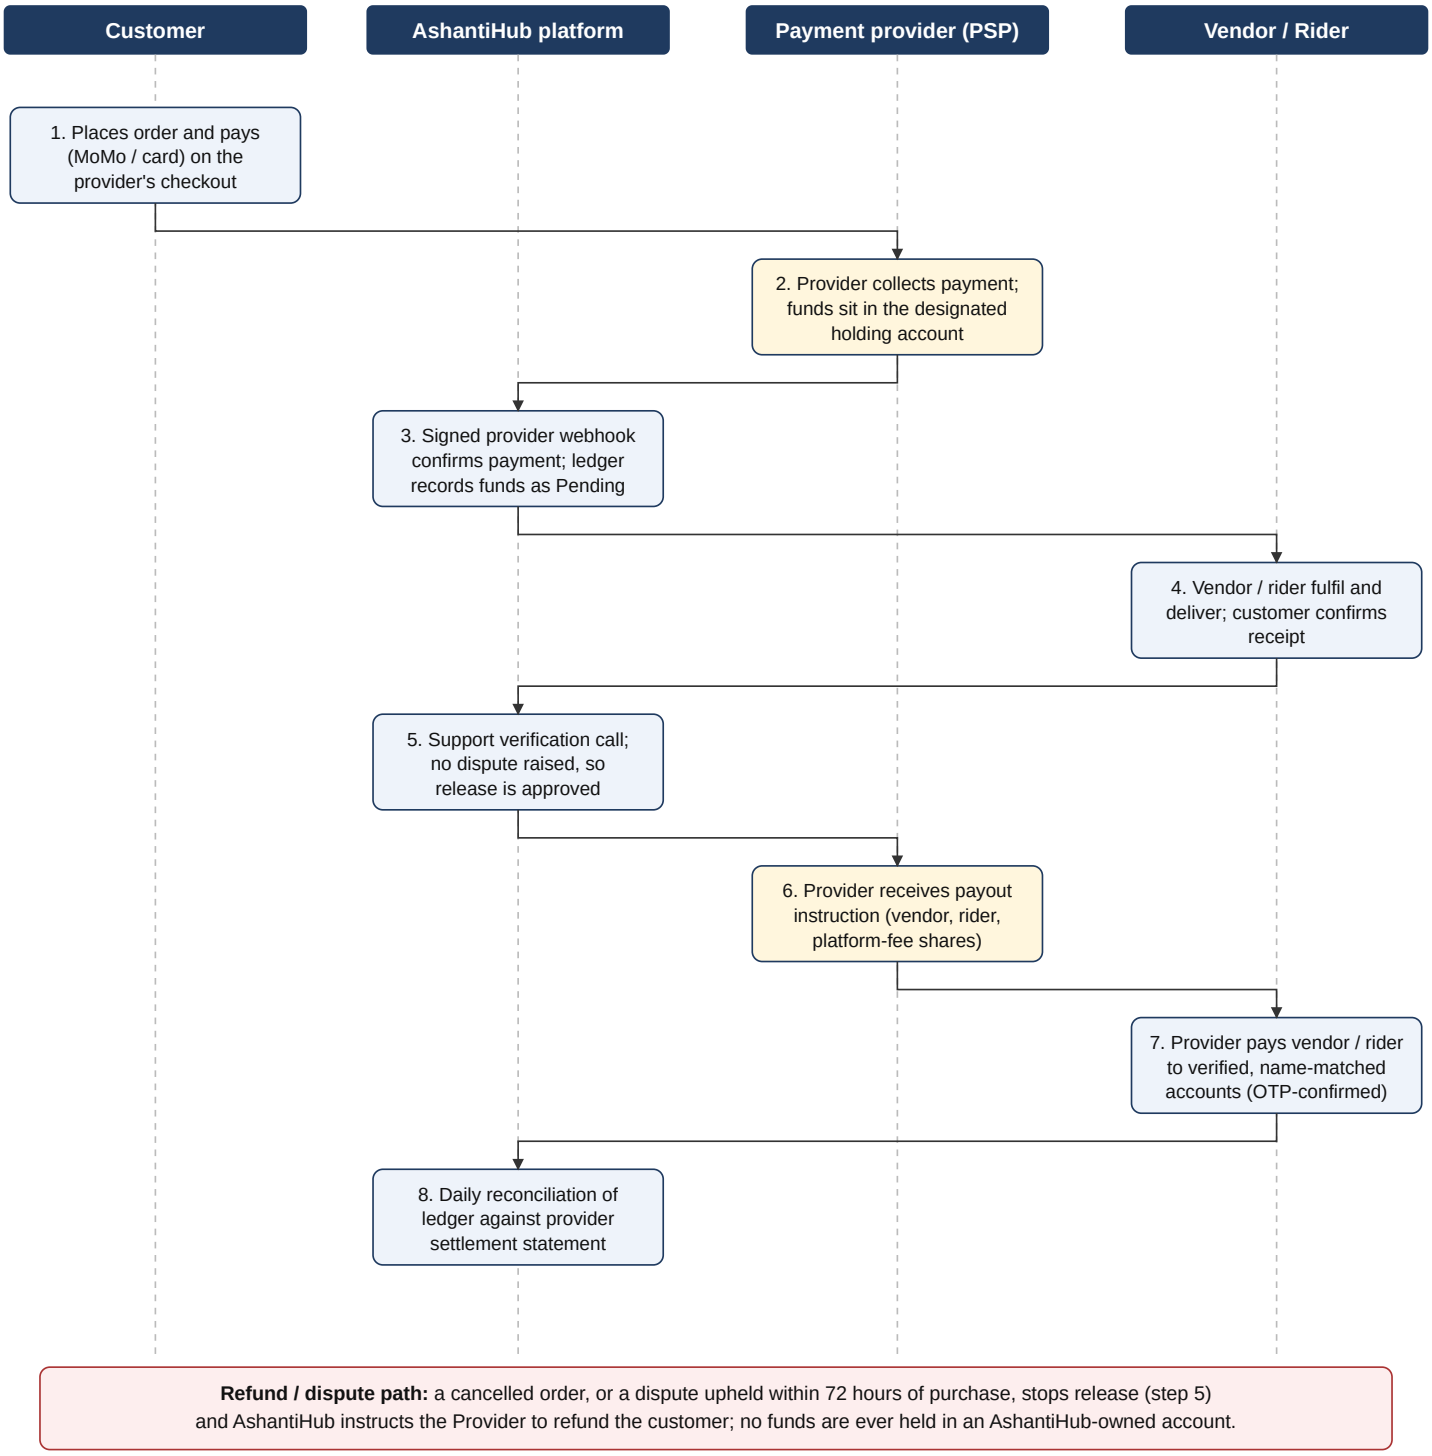

Figure 1: Payment, holding, release and reconciliation flow. Shaded boxes are actions by the Provider; funds remain with the Provider throughout.

5. SAFEGUARDS BUILT INTO THE DESIGN

Area	Control

Segregation of funds	Customer and vendor money stays in the Provider's holding account, separate from AshantiHub's operating funds.
Ledger integrity	Double-entry ledger; every movement is a recorded entry; payments are idempotent and verified by signed provider webhooks.
Reconciliation	Ledger balances reconciled against the Provider's settlement statements, with exceptions reported to our Accounts team and Super Admin.
Payout security	Payout accounts must match the verified name on the vendor's KYC record, be confirmed by one-time password, and observe a cooling period before first use or after a change. Withdrawal limits are configurable.
Customer protection	Escrow-style release, human verification call, 72-hour dispute window, refunds returned to the customer's original payment source or wallet.
Vendor onboarding	Vendors are identity-verified (Ghana Card and business details) before they can receive payouts.
Internal controls	Role-based staff access, maker-checker approval for fee and limit changes, full audit trail, mandatory OTP for sensitive actions.
AML / data protection	Transaction monitoring and suspicious-activity escalation under applicable AML/CFT obligations; personal data handled under the Data Protection Act, 2012 (Act 843) [AshantiHub Data Protection Commission registration number] .

6. CURRENT STATUS AND OUR COMMITMENT

The wallet, ledger and payout features are designed and have been developed on simulated payment rails. They are switched off and will not be enabled for the public until we have the Bank's guidance, the Provider's written confirmation of its role and licence, and completed live-rail testing. We will operate within all wallet and transaction limits set by the Bank and the Provider, and our limits are configurable so that we can adjust promptly to any directive.

7. ENCLOSURES

1. Certificate of incorporation and company particulars [attach]
2. Provider service agreement or letter of intent, and evidence of the Provider's licence [attach]
3. Technical and controls summary of the wallet and ledger design [attach]
4. Terms of service and wallet terms for customers and vendors [attach]

We would be grateful for the Bank's guidance and are ready to provide any further information. Thank you for your consideration.

Yours faithfully,
